

**SAUDI
INNOVATIONS
WINDOW**

The Saudi Inventions Portal at a glance:

The construction of the Saudi Inventions Window, a non-governmental organization, began in July 2014, has chosen to establish its headquarters in the city of Riyadh. The Portal works with inventors by supporting, improving, and marketing their inventions globally.

This goal is furthered by assisting researchers, both men, and women, in fully benefiting from their inventions as these are marketed locally and globally.

Our vision:

We endeavor to turn ideas and creative research into products that are sold locally and globally.

Our mission:

As we look toward the distant future, we know that we must first distinguish ourselves by supporting scientific research, analysis, and discoveries, turning these into living ideas and striving to constantly improve them until they can fulfill an international role

Our partners:

Our journey began with the ongoing task of seeking the best international institutions and organizations in the field of inventions to connect companies at regional and global levels
